

AI Usage Report

Learnshapes LMS Plugin

Documentation of AI-assisted workflows, prompt engineering, implementation assistance, and manual engineering contributions used during the development of the Learnshapes LMS Plugin.

PROJECT NAME

Learnshapes LMS Plugin

PREPARED BY

Avijit Dhar

GENERATED ON

2026-06-08

AI TOOLS USED

ChatGPT, Antigravity IDE

VERSION

1.0.0

REPORT TYPE

Usage Documentation

1. Purpose of This Report

This report documents the AI-assisted development workflow used during the planning, UI/UX visualization, implementation, and optimization phases of the Learnshapes LMS Plugin.

- AI-assisted prompt creation
- Workflow planning
- Visual UI prompt generation
- AI-assisted implementation
- Manual customization after AI generation
- Production-level engineering refinement

2. AI Tools Used

AI Tool	Usage Purpose	Contribution
ChatGPT	Prompt creation & workflow planning	Feature planning, LMS architecture guidance, workflow documentation, frontend/backend planning, UI/UX suggestions, enrollment flow planning, shortcode structure guidance, and technical documentation assistance.
ChatGPT	Pictorial image prompt creation	Generated detailed visual prompts for LMS dashboards, course pages, backend panels, enrollment systems, payment flow representation, quiz layouts, and responsive UI structures.
Antigravity IDE	AI-assisted implementation	Code implementation assistance, refactoring support, logic suggestions, file generation, development acceleration, workflow optimization, and coding productivity enhancement.

3. Prompts / Workflows Followed

LMS Architecture Planning

- Course structure planning
- Student/instructor dashboard workflow
- Enrollment process design
- Plugin architecture planning

Frontend UI/UX Planning

- Course page layouts
- Locked course states
- Payment flow UI
- Responsive dashboard concepts

Backend Workflow Planning

- WordPress hook/filter planning
- Dynamic shortcode architecture
- Admin settings structure
- LMS module organization

Pictorial Prompt Workflow

- Dashboard visualization prompts
- Enrollment flow image prompts
- Quiz UI prompts
- Backend representation prompts

AI-Assisted Coding Workflow

- Initial code scaffolding
- Refactoring suggestions
- Logic optimization
- Workflow acceleration

4. AI-Assisted Portions of Development

LMS Workflow Planning

UI/UX Structure Planning

Enrollment Flow Concepts

Dashboard Visualization

Course Architecture Planning

Plugin Structure Suggestions

Dynamic Shortcode Planning

Technical Documentation

Code Refactoring Assistance

Initial Implementation Guidance

Visual Prompt Generation

Development Workflow Assistance

5. Manual Customizations & Improvements

"AI-generated outputs were manually reviewed, customized, optimized, and refined before final implementation."

Manual Code Refinement

- Refactored generated code
- Optimized plugin structure
- Improved maintainability
- Applied WordPress standards

Custom Feature Development

- Manual LMS logic implementation
- Dynamic functionality integration
- Custom workflow handling
- Business logic adjustments

UI/UX Improvements

- Responsive layout improvements
- Better dashboard alignment
- User experience refinements
- Frontend adjustments

Manual Testing & Debugging

- Workflow testing
- Error fixing
- Logic verification
- Feature validation

Final Optimization

- Cleanup and refinement
- Stability improvements
- Performance optimization
- Production readiness adjustments

6. Development Lifecycle

8. Appendix: AI Workflows in Action

Below are visual examples of the AI-assisted development process using the Antigravity IDE, demonstrating real-time code generation and refactoring.

7. Outcome

The **Learnshapes LMS Plugin** was developed using a combination of AI-assisted workflows and manual engineering refinement.

AI tools accelerated:

- Planning & Documentation
- Workflow visualization
- Prompt engineering
- Initial implementation support

Manual development ensured:

- Production-level quality
- Stable plugin architecture
- Custom LMS functionality
- Optimized workflows & debugging

The final plugin includes scalable LMS architecture, responsive frontend/backend systems, and custom WordPress-based functionality.
